Anti-Mould Additive

Alternatively, if you wish to use your own coloured paint, you can mix **MouldX Anti-Mould Additive** with any water based paint to give it effective and powerful anti-mould properties. The Additive can also be mixed with plaster, grout, adhesives, fillers and wallpaper pastes. Ideal for kitchens, bathrooms and other damp and high humidity areas.

- For addition to paint, plaster, grouts, adhesives, pastes, fillers etc
- Immediate & long-term protection against mould, mildew and algae
- Does not affect colour or performance of materials
- Can also be used as a surface protector
- Concentrated. Sufficient for 40lt of paint
- Size: 1lt

Anti-Mould Silicone

One of the most common surfaces to display mould growth is the sealant used around sanitary ware in bathrooms & kitchens. **MouldX Anti-Mould Silicone** is a premium grade silicone sealant with extremely powerful anti-mould properties.

- Mould, mildew and bacterial proof
- Non-staining and non-yellowing
- Premium grade 100% silicone
- Size: 310ml

Apart from using MouldX products the following common sense measures apply in reducing the risk of mould and mildew growth in the home.

- Always ventilate areas of high humidity and moisture
- Find and fix water leaks immediately
- Discard clutter and excess stored materials
- Clean and maintain the home frequently

Severe mould infestations may require remedial building work and the treatment and removal by professionals.

Anti-Mould Products

Mould Damages Your Home

Mould Damages Your Health

Mould Is Unsightly And Smells

www.mouldx.com

PRODUCTS

Moulds are microscopic fungi, a group of organisms which also includes mushrooms and yeasts. You encounter mould every day. Food spoils because of mould. Leaves decay and pieces of wood lying on the ground rot due to mould.

However, in the home or at work their presence is dangerous. The black growth on wet window sills and walls is mould. Paper or fabrics stored in a damp place get a musty smell due to the action of moulds.

Around Windows

Moulds will grow when provided with moisture and surface to grow on. High moisture levels can be the result of water coming in from the outside, through the floor, walls or roof; or from plumbing leaks; or moisture produced by the people living in the home, through daily activities like bathing, washing clothes or cooking.

Walls & Ceilings

Moisture accumulates within the home when there is not enough ventilation to expel that moisture.

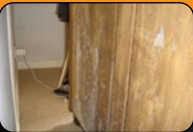

Pipes / Leaks

Behind Cupboards

Tiles & Grout

Cupboards

Baths & Showers

Mould is dangerous.

It is damaging the materials and surfaces it grows on in the same way that mould decays wood and leaves in the garden. Mould can have negative health affects. Exposure to mould occurs when airborne mould cells, mostly spores, are inhaled. We breathe in these cells every day, indoors and out. Usually these exposures do not present a health risk.

But when exposure is great, some individuals, particularly those with allergies and asthma, can experience illness from triggering asthmatic episodes in sensitive asthmatics to poisoning caused by toxins when very large doses of certain moulds are inhaled or ingested.

PRODUCTS

MouldX Cleaner with Chlorine
